

my Brain-Boy®

The Brain-Boy® - a part of whole

The Brain-Boy® is a very important part of the Warnke®-method which has been developed in co-operation between analysis and practice.

The Warnke®-method includes a test method which identifies the current level of listening and speaking converting of your child. From this it follows an individual of your child constructed causation-training which works: The Warnke®-method is characterised by a big success rate – and this with age-specified approach.

The Brain-Boy® features

- Eight different games
- Clear menu navigation
- Positive feedback
- Easy handling (only three buttons)

Already with a daily training time from 10 to 15 minutes you can see an improvement in apperception, attention and understanding within six to eight weeks. Especially effective is the Brain-Boy® in association with the Warnke®-Lateral training.

... success at school ...

Dear parents,

Children with problems in school have to study much more than their schoolmates – but very often that does not help. Why? Because mostly – although normally or even above average intelligence – the necessary basic skills for certain handling of language in the brain is not developed enough.

The *Brain-Boy*® trains this function effectively: In order to that it opens academic and linguistic success to your child and it becomes “classroom-survivable”. The special potency of this training is based of a special patent-registered treatment by which the brain learns playfully and intuitively.

As one important component of the Warnke-Method the *Brain-Boy*® helps especially children with reading and writing problems. But also for children with maths problems, attention deficit disorder and other school problems the *Brain-Boy*® affords an important possibility to advance. More than 2.000 therapists in Germany, Austria and Switzerland work with the Warnke-Method which has tested by the “Medical Academy of Hanover”.

Elisabeth Bürgi*, Solothurn (CH), therapist

I am very responsive and satisfied from this therapy. Furthermore I wish you a lot of success and enjoyment with your work. You said very right: It has to be exciting every time. Exactly like this I feel with my work with every individual child: exciting, new and challenging.

Joachim Garms, Lahntal (D)

Overjoyed I can tell you that my son Sören could leave the special school for language-handicapped children after one and a half year. Without your help Sören wouldn't have managed the jump so fast. Normally the jump to a normal school happens only to ten from 74 children. That Sören could then even leave the school to the middle of the year is a sensation. Something like this we have never experienced before.

Brain-Boy® at dyslexia

Approx. 10–15% of all pupils have heavy learning disabilities. Most of them suffer at dyslexia. Traditional views couldn't provide nameable activity. Unlike the Warnke-method: According to a report of the ministry of culture/education of Thuringia 40% of the pupils with reading and writing problems improved their error rate in only four months. With the *Brain-Boy*® the Warnke®-method estimates at the base. Basic functions for safe treatment from language in the brain will be skillet. That is the reason why your child will advance his competence in writing and reading significant through the playfully training within few weeks.

Brain-Boy® at ADD/ADHD

Especially for children with ADD/ADHD the school time can be cruelty because in a class with mostly more than 30 children it is more than difficult to be concentrated on the teacher and the tasks. The *Brain-Boy*® trains the concentration on a playfully way and trains the function of the brain which make the learning much easier.

Karin Mühleis*, Barnten (D)

Through the Warnke-Method and because of the coaching from his occupational therapist our seven year old son Fabian has come out of a very hopeless position in only two months. Sometimes there are rebounds, too. Fabian is still on the move but we know the way he has to go and a goal is set. The best: Fabian is a happy child again. He can live out his high spirits and enjoy his happy moments to the full.

Ben Schirmeyer*, Soltau (D)

In the beginning I found it strange but than my brother wanted to have the *Brain-Boy*, too. We really argued about who was allowed to be the first playing with the *Brain-Boy*. We've wrote down our results and you could see that we became better and better. Anyway I have been faster all the time. But I am also the older one.

With *Brain-Boy*® to success at school

Finally you can make sure yourself that your child has more fun and success at school again. With the *Brain-Boy*® your child has the possibility to advance the necessary skills for reading, writing and concentrating effectively in a short time.
